<p>A.</p> <p>A coach leaves the station at 10am and reaches Gloucester station at 11.30am. It stops here for half an hour. It then carries on for 30 minutes reaching Worcester 40 km later.</p>	<p>B.</p> <p>A cyclist rides downhill towards home for 15 minutes. At the bottom of the hill she stops for half an hour for a drink. She then continues uphill for the remaining 12 km.</p>	<p>C.</p> <p>A car travels at a constant speed for 2 hours on the motorway. It stops at the service station for two hours, then travels in heavy traffic at for 30 km.</p>
<p>D.</p> <p>A bus leaves school at 9am and gets to its destination at 10.30am. The children look around the museum for an hour then return back to school. The bus arrives back at midday.</p>	<p>E.</p> <p>A toddler rides his bike up the pavement for 10m. He then turns around and rides back. 2m from home, he hits a bump and falls off his bike.</p>	<p>F.</p> <p>A motorbike rider rides for 36 miles at a steady speed. She stops to read the map for 15 minutes then rides for the remaining 24 miles at a very illegal fast speed.</p>
<p>G.</p> <p>A man drives to his friend's house who lives 60 km away, stops for an hour then returns home in 2 hours.</p>	<p>H.</p> <p>A cyclist rides for 2 hours travelling constant speed. He then stops to rest for 30 minutes then continues for a further 18 miles.</p>	<p>I.</p> <p>A train is travelling back to Bristol. After 15 miles, a tree has fallen on the track at Bath and the train stops for 30 minutes while it is cleared. The train then travels the remaining 10 miles slowly.</p>

Name _____ Date _____

BAR GRAPHS SHEET 2B - PET SURVEY

The children in Salamander Class had a vote on their best pet.

- Which pet got the most votes? _____
- How many more votes did the dog get than the cat? _____
- How many more votes did the fish get than the bird? _____
- How many more votes did the rabbit get than the fish? _____
- How many votes did the bird and fish get in total? _____
- 'The dog got more votes than the fish and hamster put together'.

Is this true? _____

PICTURE GRAPHS 2A - WEATHER SURVEY

Children in a school write down weather symbols for each day in March.

Symbol	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	25	26	27	28	29	30	31
Sunny	☀	☀	☀	☀	☀	☀	☀	☀	☀	☀	☀	☀	☀	☀	☀	☀	☀	☀	☀	☀	☀	☀	☀	☀	☀	☀	☀	☀	☀	☀	☀
Cloudy	☁	☁	☁	☁	☁	☁	☁	☁	☁	☁	☁	☁	☁	☁	☁	☁	☁	☁	☁	☁	☁	☁	☁	☁	☁	☁	☁	☁	☁	☁	☁
Rainy	☔	☔	☔	☔	☔	☔	☔	☔	☔	☔	☔	☔	☔	☔	☔	☔	☔	☔	☔	☔	☔	☔	☔	☔	☔	☔	☔	☔	☔	☔	☔
Snowy	☄	☄	☄	☄	☄	☄	☄	☄	☄	☄	☄	☄	☄	☄	☄	☄	☄	☄	☄	☄	☄	☄	☄	☄	☄	☄	☄	☄	☄	☄	☄
Stormy	⚡	⚡	⚡	⚡	⚡	⚡	⚡	⚡	⚡	⚡	⚡	⚡	⚡	⚡	⚡	⚡	⚡	⚡	⚡	⚡	⚡	⚡	⚡	⚡	⚡	⚡	⚡	⚡	⚡	⚡	⚡

- Which weather was the most common? _____
- Which weather was the least common? _____
- How many days was it sunny? _____
- How many days was it either rainy or stormy? _____
- How many more days was it sunny than rainy? _____
- How many more days was it cloudy than sunny? _____
- Paul takes his dog for a walk in the morning when it is not wet, snowy or stormy. How many days in March would he walk his dog? _____
- Suppose there were more cloudy days than sunny and stormy days put together. Is it right? _____
- How many days are there in March? _____

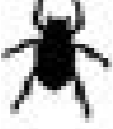

Name _____ Date _____

SCALED PICTURE GRAPHS 3A - BUG HUNT

Salamander Class went on a bug hunt looking for bugs in different habitats.

Each  represents 5 bugs.

Long grass									
Short grass									
Under logs									
Pond									
On leafy plants									

- 30 bugs were found in under logs. Show this in the picture graph.
- What was the most common place to find bugs? _____
How many bugs were found there? _____
- What was the least common place to find bugs? _____
How many bugs were found there? _____
- How many more bugs were found in the long grass than the short grass?

- Double the number of bugs were found in the pond than on leafy plants.
True or false? _____
- How many bugs were found in total that day? _____

- Which feature of a graph allows acceleration to be determined?
A. the area under a displacement-time graph
B. the area under a velocity-time graph
C. the slope of a displacement-time graph
D. the slope of a velocity-time graph

- A boy throws a ball vertically upwards. It rises to a maximum height, where it is momentarily at rest, and falls back to his hands.
Which of the following gives the acceleration of the ball at various stages in its motion? Take vertically upwards as positive. Neglect air resistance.

	rising	at maximum height	falling
A	-9.81ms ⁻²	0	+9.81ms ⁻²
B	-9.81ms ⁻²	-9.81ms ⁻²	-9.81ms ⁻²
C	+9.81ms ⁻²	+9.81ms ⁻²	+9.81ms ⁻²
D	+9.81ms ⁻²	0	-9.81ms ⁻²

- The diagram shows a velocity-time graph for a car.

- What is the distance travelled between time $t = 0$ and $t = 4$ s?
- A. 2.5m B. 3.0m C. 20m D. 28m

Calculating simple interest is an essential skill for anyone who maintains a bank account, carries a credit card balance, or applies for a loan. The free printable worksheets in this lesson will improve your homeschool math lessons and help your students become better at calculations. This collection of worksheets will also help students understand the process using word problems. Answers are provided for each of the five worksheets on the second page of grading. Before having students start on the worksheets, explain that when you borrow money, you have to repay the amount you borrowed as well as any added interest charges, which represents the cost of borrowing. In the same way, explain to students that when you lend money or deposit funds in interest-bearing accounts, you typically earn interest income for making your money available to other people. D. Russell Print the PDF: Simple Interest Worksheet No. 1 In this exercise, students will answer 10 word problems about calculating interest. These exercises will help homeschoolers learn how to calculate the rate of return on investments and illustrate how interest can accrue over time. Students will answer such questions as, "How much interest does a \$318 investment earn at 9 percent over one year?" Explain to students that the answer would be \$28.62 because 318×9 percent is the same as 318×0.09 , which equals \$28.62. Explain to students that they would have to pay this amount of interest in addition to repaying the principal, the amount of the original loan, \$318. D. Russell Print the PDF: Simple Interest Worksheet No. 2 These 10 questions will reinforce the lessons from worksheet No. 1. Homeschoolers and other students will learn how to calculate rates and determine interest payments. For this PDF, students will answer word problem questions such as: "If the balance at the end of eight years on an investment of \$630 that has been invested at a rate of 9 percent is \$1,083.60, how much was the interest?" If students are struggling, explain that calculating this answer involves only simple subtraction, where you subtract the initial investment of \$630 from the ending balance of \$1,083.60. Students would set up the problem as follows: $1,083.60 - 630 = 453.60$ Explain that some of the information in the question was extraneous and not necessary to solve the problem. For this problem, you don't need to know the years of the loan (eight years) or even the interest rate; you only need to know the beginning and ending balance. D. Russell Print the PDF: Simple Interest Worksheet No. 3 Use these word questions to continue practicing how to calculate simple interest. Students can also use this exercise to learn about the principal, rate of return (the net gain or loss on an investment over a specified time), and other terms commonly used in finance. D. Russell Print the PDF: Simple Interest Worksheet No. 4 Teach your students the basics of investing and how to determine which investments will pay the most over time. This worksheet will help your homeschoolers polish their calculating skills. D. Russell Print the PDF: Simple Interest Worksheet No. 5 Use this final worksheet to review the steps for calculating simple interest. Take time to answer questions your homeschoolers may have about how banks and investors use interest calculations. A graphing calculator is a unique tool in math and science. Graphing calculators perform the same functions as a regular calculator, and have more complex functions, like being able to calculate fractions, logarithms, and square roots. There are some big names in graphing calculators that are trusted and have been around for a long time—you may recognize the classic TI-84 from one of your math classes. Online graphing calculators are fairly new, and often free. We'll go over the best physical and online graphing calculators to help you decide which one is right for you. What Is a Graphing Calculator? Graphing calculators have more powerful and complex computers than standard calculators, and are named as such because they have graphing capabilities. They can solve complex equations and plot graphs. They are also programmable, and are a useful tool if you're working on a project long term and need it to store information or solve higher level math problems. Some graphing calculators also have a CAS, or computer algebra system, meaning it can also do algebraic equations. Graphing calculators are essentially handheld computers, so it's important to get the right one for you. What Does a Graphing Calculator Do? Graphing calculators allow you to calculate statistics, and easily convert your results into a graph. Of course, plotting graphs is a highly important part of a graphing calculator. This allows you to work on the problem itself, rather than spending time working through the math. This may seem counter-intuitive. Isn't learning the math itself the point? Yes, but even if you've mastered the skills, some equations can take a long time to work through. The graphing functions and statistics are two of the main functions you'll use as a student. You may also use them for calculus and trigonometry, in which case a CAS may help. Not all graphing calculators are equipped with a CAS. Make sure you know what you'll be using your calculator, and whether or not you'll need one with a CAS. I mentioned that graphic calculators are programmable, so they can also be used to store data in case it is needed for an equation or graph later. Some researchers use graphing calculators alongside their other equipment. They plug into computers or other machines, and gather information that can later be accessed and factored into equations. Remember, graphing calculators can solve multiple equations at once so this can help save a lot of time and work. Best Physical Graphing Calculators Physical graphing calculators are a big investment, and often a really good one. If you're serious about your graphing calculator needs, and know you need a high-powered device to take with you to class, exams, or work, this mini-computer is an important part of your life. TI-84 Plus The TI-84 Plus is a traditional graphing calculator, and is a simple device on which to learn the basics of a graphing calculator. It's a great tool for middle and high school students who are beginning more advanced math studies, since the design and 10 pre-loaded apps can help you learn math skills and how to use a graphing calculator simultaneously. This calculator is approved for the SAT, PSAT, ACT, IB, and AP exams. TI-Nspire CX CAS This ultra-powerful graphing calculator is great for high school and college students taking higher level math and science courses. The 3.2 inch display screen is an amazing feature for students who are taking engineering, physics, and calculus. The CAS saves and stores information, so you can edit and manipulate equations, which helps you use your time efficiently when solving complex problems. This calculator is approved for the SAT, PSAT, and AP exams. Casio FX-9860 GII The Casio FX-9860 GII is perfect for younger students who are just learning graphing calculators and those on a budget. The extra-wide display screen and user-friendly interface make this calculator easy to navigate, though it is less powerful than some other options. It also comes with pre-loaded applications like the spreadsheet app, geometry app, and conics app, as well as the user reference guide and 200 hours of battery life. This calculator is approved for the SAT, PSAT, ACT, and AP tests. TI-84 Plus CE The TI-84 Plus CE is a high resolution, full-color backlit display calculator. It has a sleek design and tons of memory. It's a real upgrade in both power and user experience from other models, especially in terms of display and speed. It also comes with a rechargeable battery and is available in different colors. This calculator is approved for the SAT, PSAT, ACT, AP, and IB exams. HP Prime A remarkably small and thin CAS graphing calculator, the HP Prime has a huge screen display that makes it a great pick for both students and professionals that need a high-powered tool. This calculator was modeled after smartphones, and it shows. It has a touchscreen display, geometry, spreadsheet, and advanced graphing apps, and more apps available for download. The interface looks similar to a smartphone, and has additional features like exam mode. This calculator is approved for the SAT. Best Online Graphing Calculators For those who are extra mobile, online calculators are a great resource. You can try out different calculators without any financial investment, and create an account to save your work and return to it at any time and from any device. Your preferred online graphing calculator will depend on your needs and what kind of interface you prefer. GraphCalc This downloadable graphing calculator is great for those who have used or learned on TI-84's, since it lists out the functions and examples as compared to the TI-84. GraphCalc also provides instructions on how to use the calculator and all of its tools, and claims that it "almost completely replaces TI83 and TI84 Plus calculators." It also has a commonly asked questions section, and offers resources to other online graphing calculators. Desmos Desmos has a long list of examples in each category that makes this graphing calculator easy to use and understand. It has a full screen experience, so you can easily see and edit your work. It has a pop-up keyboard, allowing you to type in your equations in a dialogue box on the left side and see them displayed, while simultaneously allowing you to view the graph on the right. You can also create an account and save your graphs. Mathway Mathway has a similar layout to Desmos, and includes a popup keyboard, a dialogue box, and a side-by-side equation and graph view display. The different functions are in a drop-down menu, which is a super helpful way to navigate the calculator. It doesn't have examples, but it does have a chat-like tutorial feature allow that guides you as you learn the calculator and solve equations. It also features the ability to create an account. Meta Calculator Meta calculator actually separates out the functions of a traditional "graphing calculator" into four different calculators. On the homepage, you select the graphing calculator, scientific calculator, matrix calculator, and statistics calculator. It makes it easy to use since you're not playing around and searching for different functions if you're unfamiliar with a standard graphing calculator. You can switch between calculators using the tabs on the top, and each calculator also separates functions using tabs. So for example, the graphing calculator toggles between the equations, tables, intersections, and plot points. It makes it easy to organize and keep track of your work. Geogebra The Geogebra calculator has the most user-friendly system. The menu of tools and functions is laid out using handy graphics, which help you navigate quickly through the calculator, and easily find what you're looking for. The calculator function allows you to enter and view equations in a dialogue box on the left, and view the graph on the right. It also has a drop-down menu with the familiar options you'd find in most programs (save, export, etc) and you can create an account to save your work. How To Choose a Calculator You need to know more than just how to use a physical calculator; you have to be able to pick the right one! It's important to keep in mind that online graphing calculators are not permitted for use on the SATs, ACTs, and other standardized tests. Many physical calculators are approved for test-taking, so if you do buy a physical one, check to make sure it is approved for use. If you do not buy a physical calculator, make sure to have a plan for when you take standardized tests, like renting or borrowing a calculator. If you are not a math or science major, you may only use a graphing calculator for homework in a course or two to support you on equations or problems. In this case, an online calculator may be the way to go. For those courses, check with your teacher or professor to see if you're able to use an online one in class. You may also just find an online graphing calculator interface easier to use. Online calculators also allow you to save your work, and access it from any device through your account. If you are most comfortable being mobile instead of carrying around a graphing calculator just in case, online may be right for you. For math and science majors who plan to have a career in STEM, investing in a good physical graphing calculator could be the way to go. Since you'll be using it often, you'll get your money's worth and not have to worry about things like accessing Wifi if you want to use a graphing calculator. When buying a graphing calculator, it's important to consider how you're going to use it. If you need something to take to long exams in college, things like screen display, processing speed, and battery life are also factors. Also, make sure you know whether or not you'll need a calculator with a CAS or not. If you're looking for a calculator to use for only a semester or two, it is possible to rent one or buy them used online, in addition to the great free online calculators listed above. You may also look for student discounts available through your school or a retailer. Graphing calculators are an incredibly useful tool. They allow students to access high-level math in a visual way, and cut through a lot of time-consuming equations. There are lots of options for these calculators, and a lot to consider when deciding which one to get, or if you even need to own one at all. At the end of the day, the priority is that you get all the tools you need to learn and excel. What's Next? Looking for more info on using graphing calculators on college entrance exams?
